Does your child need help to improve his social skills?

We are conducting a behavioral treatment study to help children diagnosed with Fragile X syndrome or a non-specific intellectual disability learn eye contact and social skills.

Participation involves:
- Coming to Stanford for 4-5 days
- Cognitive testing
- Awake MRI scan
- Intensive behavioral intervention of eye contact and social skills

Inclusion criteria for participation – child must be:
- Male
- Between 8-15 years of age
- IQ between 50 and 75 points
- Diagnosed with Fragile X syndrome or a non-specific intellectual disability
- Does not experience seizures
- Able to lie still for up to 10 min with instruction

Benefits of participating:
- Potential improvement in social skills
- You will receive an honorarium of $100 for your participation

To determine your child's eligibility for the study, please click the link to go to a brief survey, or copy and paste the URL directly into your web browser.
